SUZHOU GUDWAY CNC EQUIPMENT CO.,LTD

GDC SERIES

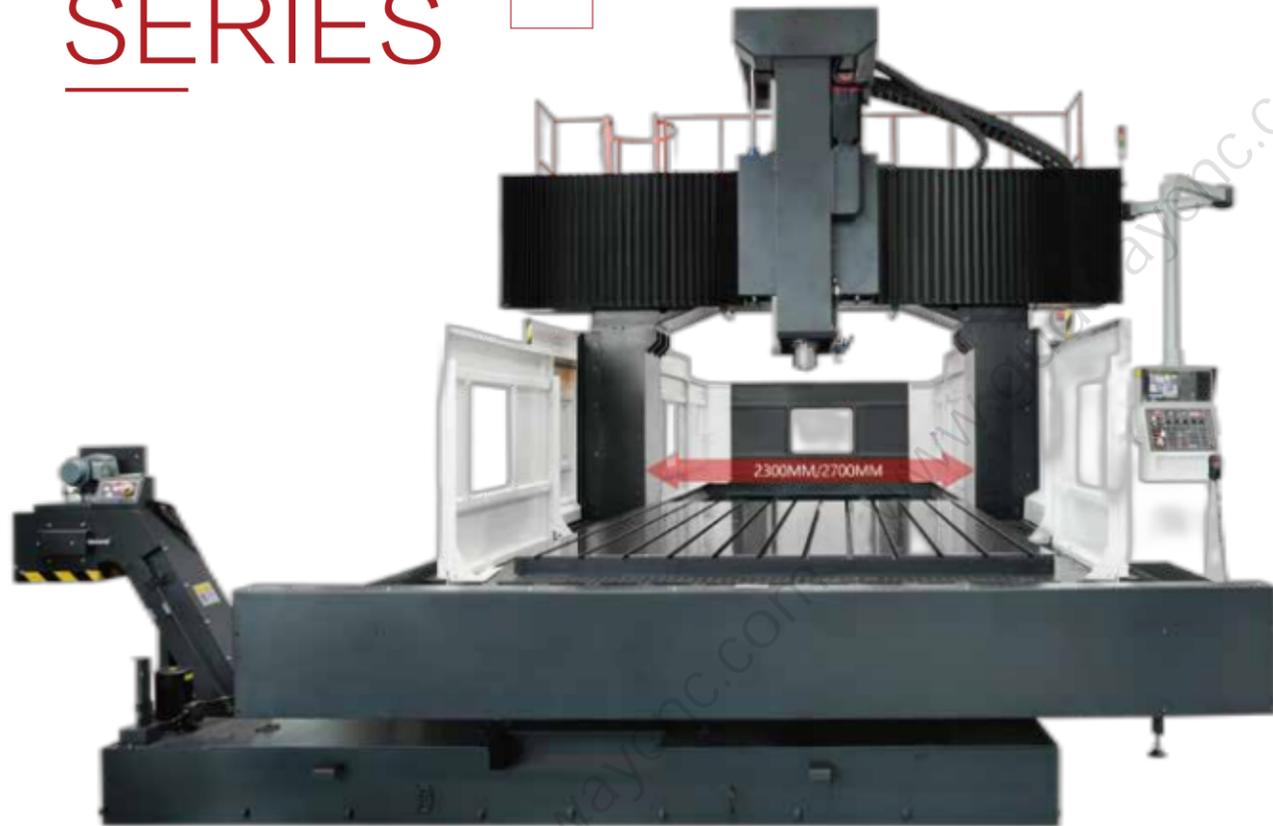

- One piece casting bed and bridge structure, providing stable rigid foundation.
- Z-axis direct rail connection type 800mm stroke, can also be selected with gear head.
- Symmetrical design of main spindle, with double balance cylinder, fast response up and down.

HIGH PERFORMANCE BRIDGE TYPE MACHINING CENTER

Adhering to Gudway traditional structural design. Focus on the best materials and components as the basis of high precision products, with solid and reasonable light weight design balance principle for the product to create a high rigidity and high stability required for high-speed cutting products.

GDC SERIES

HIGH PERFORMANCE BRIDGE TYPE MACHINING CENTER

Series of product line, modular design, specifications complete. It can be matched with a variety of additional head accessories to realize the advantages of automation, high efficiency and high productivity.

- GDC Series X-axis guide-way adopts 55mm heavy-duty roller-way, symmetrical four track full support worktable, and low friction coefficient track, which can effectively maintain the smooth sliding characteristics, When the workbench is loaded, and make the displacement accuracy surpass the traditional hard rail performance.
- Our welding base & castings column are characterized by the effective absorption of vibration force from machining on the structural ribs.
- Super rigidity roller liner guide way achieves fast movement with low abrasion from linear guide way which completely improves rigidity and control of the machine.

GDC SERIES

- GDC series X-axis guide way adopts the heavy-duty type roller way with a width of 55 mm, with three overweight load type roller way supporting the worktable. Cooperate with the low friction coefficient line rail, which can effectively keep the smooth sliding of the table when it is loaded. so that the displacement accuracy is better than that of the hard rail.
- Large -size beam, Y axis orbit line rail stepped structure design. The upper track is placed above the beam and the lower track is close to the spindle, sharply increasing beam with two guide rails' span. Z axis with greater travel at the same time also has a higher accuracy stability and cutting rigidity.
- Wide span column structure provides optimal machining rigidity. The headstock retains stability and accuracy even under high speed traveling.

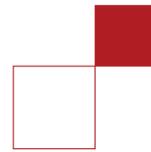

型号	Worktable size	轨道跨距	底座宽度
GDC series	2400/2500mm	862mm	2200mm
GDC series	3000mm	1100mm	2700mm

HIGH PERFORMANCE BRIDGE TYPE MACHINING CENTER

HIGH TORQUE GEAR SPINDLE

SYMMETRICAL BALANCE DESIGN OF SPINDLE CENTER

STRONG STABILITY DURABILITY AND SCALABILITY

WITH ALL KINDS OF DIFFERENT PROCESSING NEEDS, CHOOSING VARIOUS SPEED SPINDLE GEAR 600ORPM, DIRECTTYPE 8000/1000ORPM.

Face milling

Tool diameter: 125mm
Material removal rate: 750c.c/min

End milling

Tool diameter: 25mm
Feed rate: 500c.c/min

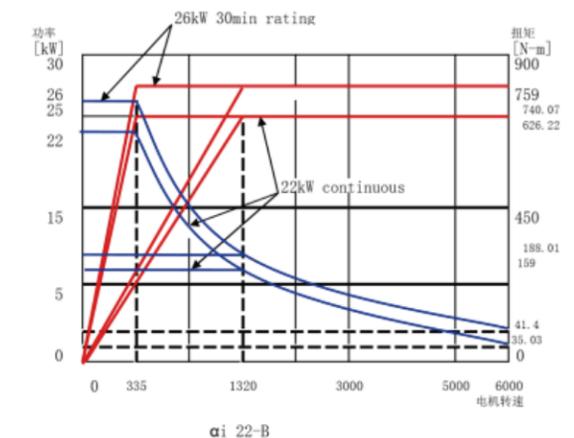

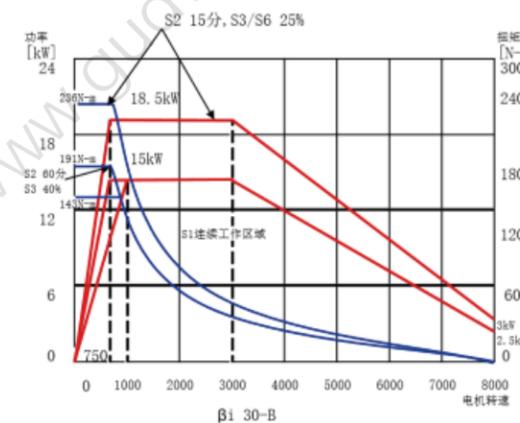

U Drilling

Drill tool diameter: 32mm
Cutting feed: 550c.c/min

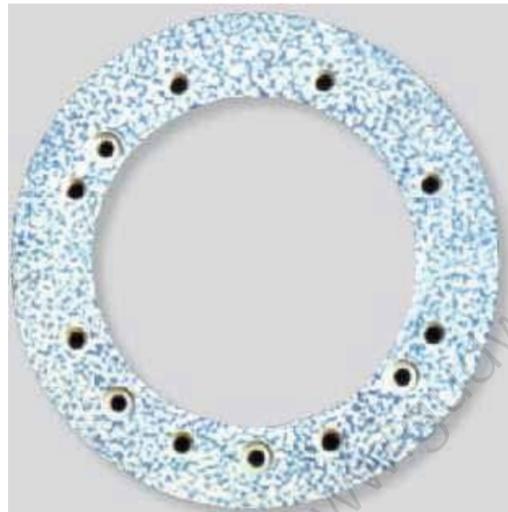

- The minimum distance design between the center of the spindle and Z-axis rail, shortening the cutting force arm to improve cutting rigidity greatly.
- The spindle, the Z-axis screw, the center line of the spindle and the center line of the motor are symmetrically arranged on the Z-axis box-way structure with the same center point, providing the best stable movement of the Z-axis.
- Gear type spindle adopts imported precision gear, with high precision, low noise and high transmission efficiency performance.
- Gear type spindle adopts two-step automatic gear change to provide high torque and high-speed cutting rigidity characteristics of heavy cutting, so as to ensure heavy cutting ability and smooth surface.
- The output torque leading industry for more than 15%, providing excellent heavy cutting performance.
- Spindle speed 6,000rpm, Maximum torque 236Nm(15/18.5kW), 759Nm(22/26kW).

SPINDLE TORQUE GRAPH

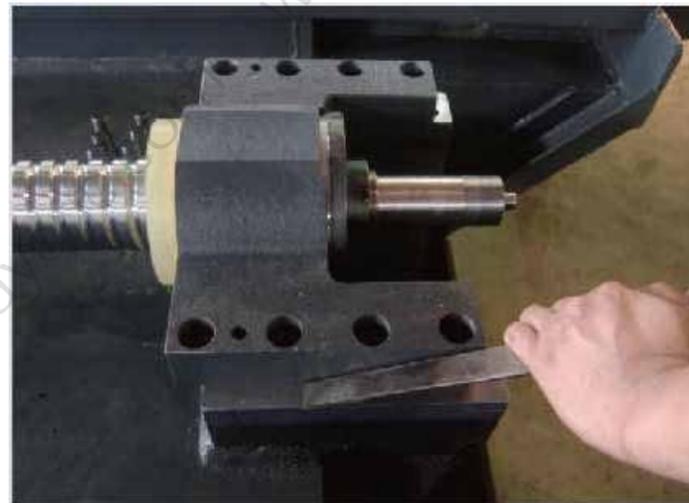

SCRAPING PROCESS

Precision assembly is the most important part during processing; to ensure the precision, Gudway's assembly is completed by ourselves; to ensure the precision and quality, we stress every detail; after strict examination and record, we will go on the next process to ensure the best precision of every machine.

Spindle head of the joint surface scraping

Screw assembly and calibration

- ◆ The spindle head of the joint surface and the motor board are handled by scraping, to ensure the best function and precision.

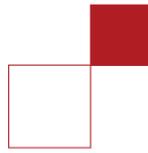

Craftsmanship
Exquisitely crafted

SCRAPING PROCESS

Scraping is a finishing process that uses scraper, reference surface, measuring tool and display agent to manually operate, while grinding, measuring and scraping, so that the work piece can meet the requirements of size, geometry, surface roughness and tightness specified in the process. Because the tools used are simple, universal, less machining allowance, and the accuracy is very high, they are widely used in the manufacturing of machines and tools and the repair of mechanical equipment. Generally, the guide rail, carriage and bearing bush of the sliding bearing of the machine tool are all finished by scraping.

MEASURING EQUIPMENT

Spindle vibration detecting

The spindle temperature detecting

On-line balancing debugging

FIRST-CLASS PROCESSING EQUIPMENT TO ENSURE HIGH QUALITY AND PRECISION

- Spindle temperature testing, operating after 24 hours detecting the temperature.
- Spindle test rod examination to ensure the precision between the certicality of the spindle and the spindle taper and shank.
- Laser examination, all movement precision by laser calibration compensation, to ensure repeated positioning precision of the machine.
- Spindle pull testing, detecting the broach force of the spindle to ensure the tool's clamping force when processing. geometric precision testing, detecting the parallelism and verticality of each axis.
- Spindle shock examination, including each speed range of the spindle, requiring less than 3 μ m to ensure the good processing precision.
- Ballbar roundness examination, adjusting the roundness and geometric precision to ensure the machine's three dimensional space movement precision.

FINELY CRAFTED TOP-LEVEL FUNCTIONALITY

◀ Manually 90° Rectangular milling head (X55)

Maximum speed: 2500rpm
Maximum torque: 1200N-m

model: A82A (Mingyang)
C-axis manual 5 / 15 degrees per scale

Model: M58S01C (rishen)
C-axis manual 5 degrees one degree

Automatic 90° Rectangular milling head (M55) ▶

Maximum speed: 3500rpm
Maximum torque: 1000N-m

Model: A55M14 (rishen)
C-axis manual 5 degrees one degree

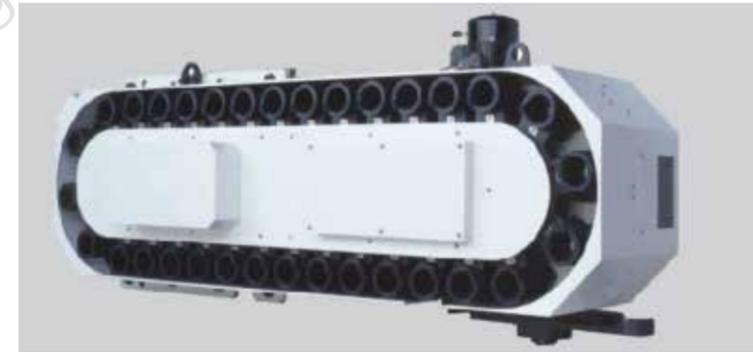

◀ Off-axis universal milling head (X57)

Maximum speed: 2500rpm
Maximum torque: 1000N-m

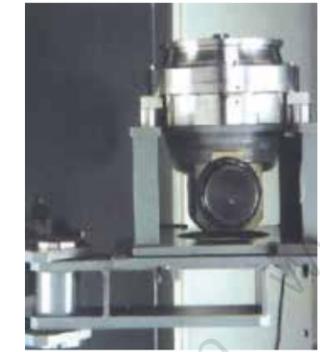

Model: A90
C-axis manual 5 degrees one degree
A axis manual one-point degree

Model: M58S01
C axis automatically 5 degrees one degree
A axis manual one-point degree

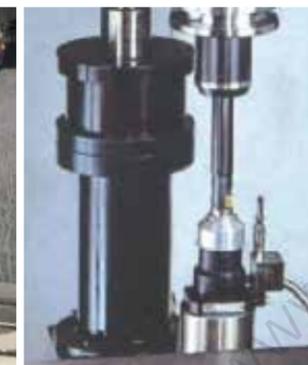

A Chain type Magazines

B Swimming Arm Head Storage

C Ring coolant system

D Automatic tool length measurement system

E Coolant through Spindle system

F Work piece measurement system

C The water spray device around the spindle can make the work piece and tools cool well.

E Coolant through spindle can directly cool the work piece and cutting tip of tool, and take away the cutting heat source, to ensure the processing quality and be suitable for the parts with deep hold processing.

F Using HEXAGON work piece measurement system

IRP 25.5 Convenient for measurement, saving more than 50% time when processing and reducing rejection rate, reducing the cost, improving processing control.

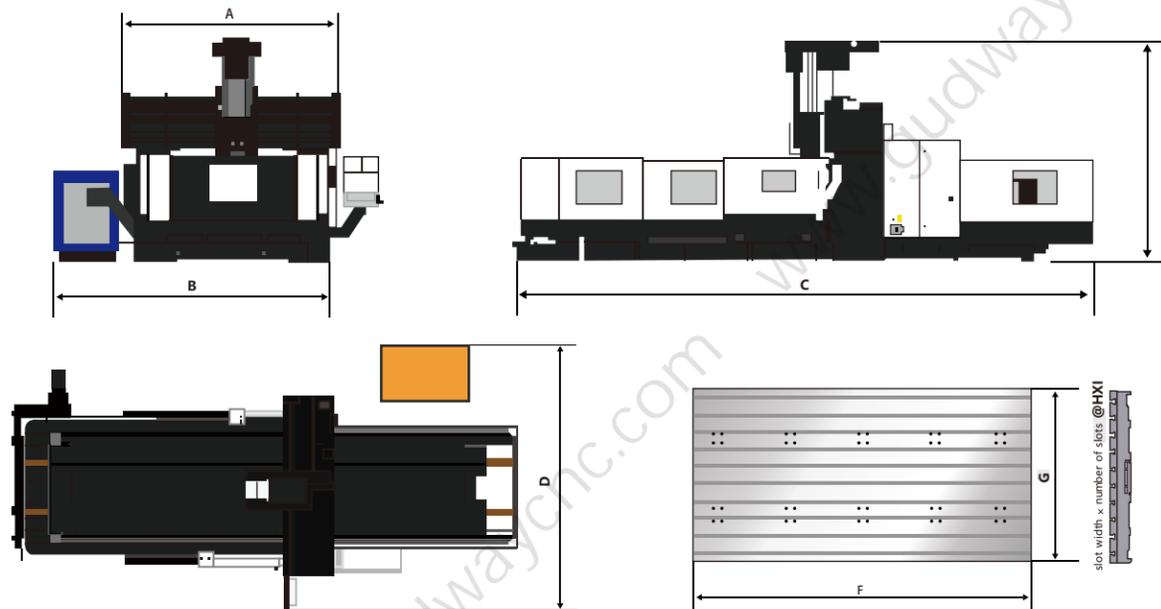

IRP 25.5 probe use small and light Micro-electronic devices, so compactness.

Probe can be equipped with the latest IRR91.50 integrated interface receiver; the system uses the most advanced modulated optical transmission method, with the ability of resistance to light interference.

Probe equipped with a 360° infrared optical transmission system, the transmission distance of 6m, can be measured on any direction.

Gudway reserves the right to alter the all designs,specifications and option list,without further notice.

Standard options

- Spindle temperature control system
- Working lamp
- Centralized automatic lubrication system
- Automatic power off function
- Cutting fluid cooling system (including pump and water tank)
- Electrical power off function
- Powerful twin screw chip curling machine
- Warning Light
- Crawler iron conveyor
- Transformer
- Fully Enclosed protective sheet metal
- Working Air soft
- Foundation horizontal block and foundation bolt
- Clean water gun

Purchase items

- Upgrade gear type 6000 rpm full tooth spindle
- External encoder
- Upgrade direct-coupled 8000/10000 rpm spindle
- RetroPting of electric cabinet box
- Upgrade built-in 20000 rpm high-speed spindle
- 24disc magazines
- Column heightening 200/300mm
- 32 chain type tool magazines
- Spindle center water outlet (limited gearbox optional)
- Fully enclosed outer cover sheet metal
- 3 axis Linear scale
